

NANDLAL JANGID

Full-Stack Developer

Jaipur, India | nick@nickdev.space | +91 82098 14681 | nickdev.space | linkedin.com/in/jangirdnick | github.com/jangirdnick

PROFESSIONAL SUMMARY

Full-stack developer with 3+ years of self-directed experience in web and cloud engineering, combining freelance client delivery with independently shipped, production-grade applications. Builds with React, Next.js, TypeScript, Node.js, and NestJS on full-stack projects, deployed on AWS using Docker and GitHub Actions CI/CD. Comfortable owning the full development lifecycle — from database schema and REST API design to containerized cloud deployment.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Redux, Zustand, Axios, Tailwind CSS, HTML5, CSS3, Framer Motion

Backend: Node.js, NestJS, Express.js, REST APIs, WebSockets, Socket.IO

Databases: PostgreSQL, MongoDB, Prisma ORM, Redis

Cloud & DevOps: AWS (EC2, S3, ECS, ECR, ALB, ACM), Docker, GitHub Actions, CI/CD

AI / LLM: LangChain, OpenAI SDK, Gemini SDK, Pinecone (Vector DB)

Tools: Git, Linux, Postman, pnpm, ESLint, Prettier

WORK EXPERIENCE

Freelance Web Developer — Self-Employed *Dec 2024 – Feb 2026*

Jaipur, India

- Delivered end-to-end website projects for multiple clients, independently managing requirements gathering, development, and deployment from start to finish.
- Built and maintained client websites on WordPress and WooCommerce, customizing themes and plugins to meet specific business requirements.
- Executed on-page and technical SEO audits using Google Search Console and Google Analytics, improving organic search visibility for client sites.
- Owned project scope and timelines end-to-end, coordinating directly with clients and a client-facing partner to ensure on-time delivery.

SELECTED PROJECTS

PixKit — Media Management & SDK *2026*

Stack: Next.js, NestJS, TypeScript, Tanstack Query, Zustand, PostgreSQL, Prisma, AWS S3, Sharp, Turborepo, GitHub Actions

pixkit.nickdev.space | github.com/jangirdnick/pixkit | npmjs.com/package/@nickdjangir/pixkit-sdk

- Engineered a media management platform and image CDN as a Turborepo monorepo with a Next.js dashboard, NestJS REST API, and a published TypeScript SDK.
- Integrated AWS S3 pre-signed URLs for secure, direct-to-cloud uploads, using Prisma/PostgreSQL for high-speed metadata caching.
- Implemented on-the-fly image transformation with Sharp to auto-serve optimized WebP/AVIF formats, reducing bandwidth and load times.
- Applied advanced production-grade code practices and design patterns to ensure robust architecture and system reliability.
- Implemented comprehensive JSDoc documentation across the codebase, significantly enhancing code observability, maintainability, and developer overview.
- Enforced production-grade code quality by configuring a strict developer experience pipeline utilizing ESLint, Prettier, Husky pre-commit hooks, and GitHub Actions for continuous integration.

Perpx — AI Research & Chat Platform *2026*

Stack: Next.js, TypeScript, Tanstack Query, Redux, NestJS, PostgreSQL, Prisma, Redis, LangChain, Pinecone, Socket.io, AWS (EC2, S3), Docker

perpx.nickdev.space | github.com/jangirdnick/perpx

- Built a real-time AI research platform with private and team spaces, using Retrieval-Augmented Generation (RAG) via LangChain + Pinecone for context-aware chat over custom documents.
- Engineered a WebSocket architecture with Socket.io for low-latency streaming of AI responses.
- Leveraged Tanstack Query and Redux Persist for robust local data caching, enabling instant page loads directly from local storage without loading screen friction.
- Implemented seamless background API synchronization featuring stale-while-revalidate data updates to keep the UI responsive and up-to-date.
- Enforced production-grade code quality by configuring a strict developer experience pipeline utilizing ESLint, Prettier, Husky pre-commit hooks, and GitHub Actions for continuous integration.

Aayeshol — AI-Powered Social Media Content Platform *2026*

Stack: Next.js, NestJS, TypeScript, Tanstack Query, Zustand, PostgreSQL, Prisma, LangChain (Gemini, Mistral), Docker, AWS EC2, GitHub Actions

aayeshol.nickdev.space | github.com/jangirdnick/aayeshol

- Developed a full-stack AI-driven platform in a Turborepo monorepo that lets users generate, customize, and manage social media post ideas and captions.
- Integrated LangChain with Gemini and Mistral APIs to power configurable AI content generation across multiple languages, tone, and audience settings.

- Automated containerized CI/CD deployment to AWS EC2 via GitHub Actions, AWS Systems Manager, and Docker Compose.

Portfolio — NickDev2026

Stack: Next.js, React, TypeScript, Tailwind CSS v4, Motion, Lenis

nickdev.space | github.com/jangirdnick/jangirdnick

- Architected a modern personal portfolio to showcase expertise across full-stack development, AI products, and cloud engineering using the latest Next.js App Router and React 19.
- Engineered for maximum performance by building a fully static architecture with Next.js cacheComponents enabled, utilizing ImageKit CDN for optimized asset delivery and instant page navigations.
- Crafted a premium, highly interactive user experience by implementing fluid responsive layouts with Tailwind CSS v4, advanced micro-animations via Motion, and custom smooth scrolling using Lenis.
- Implemented comprehensive Technical SEO including deep structured data (JSON-LD), Open Graph metadata, Twitter Cards, dynamic sitemaps, and strict robots.ts configuration to maximize organic discoverability.
- Enforced production-grade code quality by configuring a strict developer experience pipeline utilizing ESLint, Prettier, Husky pre-commit hooks, and GitHub Actions for continuous integration.

EDUCATION

Bachelor of Arts (B.A.)2022 – 2025

Maharaja Ganga Singh University (MGSU), Bikaner

Self-directed training: Full-stack and cloud engineering (2023–Present), via structured online coursework and hands-on production project deployment.

CERTIFICATIONS & ACHIEVEMENTS

- Hackathon Participation Certificate — Sheryians Cohort Hackathon 2026, Sheryians Coding School (Team Tech Pirates), June 2026
- Independently managed AWS production infrastructure (EC2, ECS, S3, ALB, ACM) for live application workloads
- Built and launched a freelance agency website for client acquisition — studio.nickdev.space

FUTURE INITIATIVES & ROADMAP

Actively expanding technical capabilities across backend infrastructure, machine learning pipelines, and custom software utilities:

- **System & Database Design:** Mastering distributed architecture paradigms, fault-tolerant infrastructure, and advanced relational data schemas.
- **AI Engineering:** Implementing Python-based neural networks, deep learning models, and practical machine learning deployment workflows.
- **Developer Utility Software & macOS Automation:** Engineering a lightweight macOS note-taking application paired with a personal AI agent for MacBook automation, integrating directly with the app to streamline system workflows and productivity.
 - **Emerging Infrastructure & Protocols:** Exploring Model Context Protocol (MCP), networking fundamentals, and decentralized Web3 technologies.
